EDUCATION

Williams College, Williamstown, MA

Bachelor of Arts, Computer Science & Economics, May 2019; GPA: 3.58/4.00

Computer Science, relevant courses: Data Structures and Advanced Programming, Principles of Programming Languages, Discrete Math, Computer Organization, Algorithm Design & Analysis, Operating Systems, Distributed Systems, Introduction to Computer Security

Economics, relevant courses: Principles of Microeconomics, Principles of Macroeconomics, Price & Allocation Theory, Multivariable Calculus, Macroeconomics, Statistics & Data Analysis, Econometrics

SAT Reading: 800, Math: 720, SAT Math II: 780

SKILLS

Programming/Software: Proficient in C++, and Python. Experience with other programming languages including Java, C, and R. Adept at using macOS, Linux, and Windows systems

Photography/Videography: Experience with the Adobe Creative Cloud Suite (specifically Photoshop, Lightroom, and After Effects) and the Apple Final Cut Suite (Final Cut Pro and Motion)

RELATED EXPERIENCE

Williams College / Computer Science Teaching Assistant

JANUARY 2017 - PRESENT, Williamstown, MA

- Responsible for running 5 hours of TA sessions per week to assist students with labs and coursework
- Spring 2017 semester: CSCI 136, Data Structures and Advanced Programming
- Fall 2017 semester: CSCI 237, Computer Organization

Williams Students Online / Board Member

SEPTEMBER 2016 - PRESENT, Williamstown, MA

- Part of a team that designs and implements computer-based services allowing students to query information about classes, other students, dorms, and faculty
- On the leadership board that is responsible for making decisions regarding policy and future projects
- Currently developing an online portal for the numerous student organizations on campus
- Website built with the Ruby on Rails web application framework

Kroll Inc. / Information Technology & Security Intern

SUMMER 2017, Washington D.C.

- Conducted reviews of LLD (low-level design) documents detailing Kroll's infrastructure transition from in-house hardware to cloud-based solutions (AWS, O365, etc)
- Ensured there were no incongruities within or between LLDs (e.g. neglecting to include disaster recovery procedures, or incorrectly utilizing policies, procedures, or services)
- Led an effort to research and evaluate a variety of teleconferencing solutions in order to meet the needs of Kroll's different business units, ultimately proposing a solution that is currently being phased in.
- Utilized the internal Cb Response Python API to identify and analyze security threats (i.e. programmatically generated a list of suspicious processes and files on endpoint devices across the firm based on certain behavioral characteristics, including network activity, file access, and registry mods)

PROJECTS

Personal Website: Online resume, with links to projects and personal information, as well as a dynamic contact form.

Originally used static HTML/CSS, and a simple PHP script. Recently refactored to use the Django web framework. (Python)

Movie Watchlist: Online list of movies that I want to watch / have watched. Data is stored in a PostgreSQL database, and information for each movie is acquired through various APIs and web scraping. (Django web app, Python)

Seam Carving Implementation: A 'liquid rescaling' app developed with a classmate in Python using the seam carving algorithm with a dynamic programming approach. Currently working on optimizing our implementation by removing redundant computations in the DP table, and converting it to operate online as a web app. (Python)
